The plot shows the relationship between fitted values and residuals. The x-axis, 'Fitted values', ranges from -1.92 to -1.81. The y-axis ranges from -0.2 to 0.2. A horizontal dashed red line is at y=0. Data points are open circles. Most points are clustered at the extremes of the fitted values, with a few points in the middle. There is a slight upward trend at the right extreme.

A scatter plot showing the relationship between Fitted values (X-axis) and Residuals (Y-axis). The X-axis ranges from -1.92 to -1.81, and the Y-axis ranges from -0.2 to 0.2. A horizontal dashed red line is drawn at Y=0, representing the zero residual line. The data points are represented by open circles. The plot shows a clear positive linear trend, indicating that the residuals are systematically increasing as the fitted values increase, which suggests a positive linear relationship in the underlying data.
